Fuzu

Open API Documentation

25.10.2016 Version: 1 Revision: 3

Changelog:

Revision 3:
Fixed a mistake in 2nd revision causing the 1st revision country field to become invalid. Please see the differences in the implementation in case you used the 2nd revision. Sorry for the inconvenience.

Revision 2:
Added the country support.

Revision 1:
Initial release

Fuzu

All open jobs as JSON

Request type: GET
Request URL: www.fuzu.com/api/all_jobs
Return type: Array of Job objects (See Object examples)
Successful request example:

```
{
    fuzu_api:
    [
            {
                            title: "Customer Service Officer",
                            number_of_positions: 1,
                            campaign_start_date: "2015-05-04",
                            campaign_end_date: "2016-10-17",
                            job_start_date: "2015-05-18",

                            employer_name: "Toyota Kenya Ltd TEST",
                            job_level: "Mid-Level",
                            country_code: "KE"
            },
            {            Possibly more job objects }

        ]
}
```

All open jobs posted by a specific employer

Request type: **GET**
Request URL: www.fuzu.com/api/company/company_slug/all_jobs
See **"Finding company slug"** To find the needed company slug
Return type: Array of Job objects **(See Object examples)**
Successful request example:

```
{
    fuzu_api:
    [
            {
                                title: "Customer Service Officer",
                                number_of_positions: 1,
                                campaign_start_date: "2015-05-04",
                                campaign_end_date: "2016-10-17",
                                job_start_date: "2015-05-18",
                                job_end_date: null,
                                salary_min_cents: 6000000,
                                salary_min_currency: "kes",
                                salary_max_cents: 8000000,
                                salary_max_currency: "kes",
                                required_work_experience_months: 60,
                                location: "Nairobi",
                                description: "Description text as written by the employer",
                                responsibilities:"Responsibility text as written by the employer",
                                salary_info: "The salary is negotiable and bonuses given to employees
                                with additional of 3% of net profit.",
                                url: "http://www.fuzu.com/jobs/customer-service-offices",
                                country: "Kenya",
                                employer_logo: "",
                                employer_name: "Toyota Kenya Ltd TEST",
                                job_level: "Mid-Level",
                                country_code: "KE"

            },
            {           Possibly more job objects }

        ]
}
```

Empty request example in case the employer haven't posted any jobs:

```
{
            fuzu_api: [ ]
}
```

Find all locations where specific employer has open positions

Request type: **GET**
Request URL: www.fuzu.com/api/company/company_slug/locations
See "**Finding company slug**" To find the required company slug
Return type: **Array of locations**
Successful request example:

```
{
  "fuzu_api": [
    {
      "country_code": "KE",
      "display_name": "Kenya"
    },
    {
      "country_code": "MW",
      "display_name": "Malawi"
    }
  ]
}
```

Empty request example in case the employer haven't posted any jobs:

```
{
            fuzu_api: [ ]
}
```

Find all positions by specific employer in specific locations

Request type: **POST**
Content type: **JSON (application/json)**
Request URL: www.fuzu.com/api/company/company_slug/locations
See **"Finding company slug"** To find the required company slug
Return type: **Array of locations**

Request example:

```
Content type: JSON (application/json)
{
        "country_codes": ["KE", "MW"]
}
```

Country_codes is an array of countries you want to fetch the job from. You should first fetch the available positions with "Find all locations where specific employer has open positions" GET call which is documented on the previous page of this documentation.

Successful request example:

```
{
    fuzu_api:
    [
                {
                            title: "Customer Service Officer",
                            employer_logo: "",
                            employer_name: "Toyota Kenya Ltd TEST",
                            more job object data as specified on the "Object Examples"
                },
                {
                            Possibly more job objects
                }
        ]
}
```

Empty request example in case the employer haven't posted any jobs:

```
{
        fuzu_api: [ ]
}
```

Object examples

Job object:

Title: As shown on the Fuzu page
Number of positions: Positions open in this job opening
Campaign_start/end_date: When the position becomes active/inactive in Fuzu platform
Job_start/end_date: When the actual job is supposed to start/end
Salary_max/min_cents: Maximum/Minimum salary in cents
Salary_currency: USD/KES currently. You should expect any currency here
Required_work_experience_months: How many months of experience is expected
Location: City where the job is located.
Description: Job description as shown on the Fuzu platform. These are typed by the employer and might be pretty long in some cases. Truncate them if necessary
Responsibilities: Responsibilities text as shown on the Fuzu platform. These are typed by the employer and might be pretty long in some cases. Truncate them if necessary
Salary info: Responsibilities text as shown on the Fuzu platform. These are typed by the employer and might be pretty long in some cases. Truncate them if necessary
URL: URL to the job posting.
Country: Country where the job is located. When querying for jobs from certain country you should use the "code" part here.
Country_code: 2-digit ISO country code.
Employer_logo: URL to the employers logo if specified
**Employer_name:** Name of the company who posted the job opening
Job_level: Entry-level, mid-level, or Senior
Styled_flow_url: Link to the styled flow. If you have purchased a flow that matches your normal recruit site please use this one instead. The link keeps working even after the purchase expires, but doesn't use the custom CSS we have created for your campaign.

You should expect only **Title, Description and URL**. Currently we have couple more necessary fields, but to keep the API as future proof as possible we ask you to check the presence of the fields.
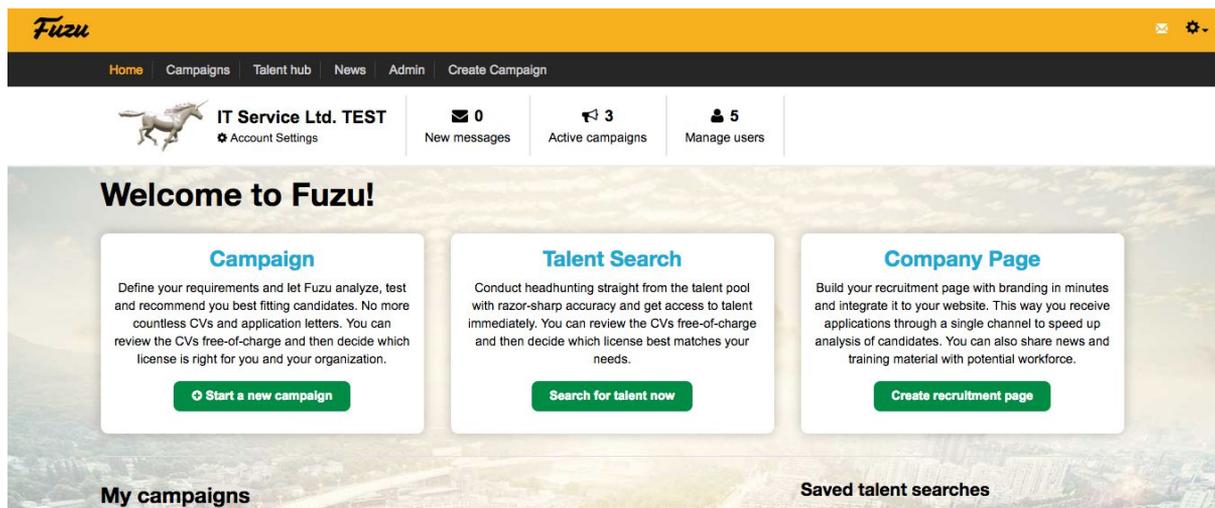

Finding company slug

1: Navigate to the some job opening your company has posted and click the company name on the right hand side of the page. In this image it's "Company name"

Alternative 1:
Login to your Employer account and click the companys name on the top bar. In this case IT Service Ltd. TEST

2: Now look at the URL: www.fuzu.com/company/company-name
In this case the company slug is "company-name"
